

**Abstract**

The purpose of this study is to explore the ethical perceptions of business students in the United States and China. The study uses a survey method to collect data from 200 students in the United States and 200 students in China. The survey covers a range of ethical issues, including honesty, integrity, and respect for others. The results show that business students in both countries have similar ethical perceptions, but there are some differences in the way they view certain issues. For example, students in the United States are more likely to view lying as acceptable in business, while students in China are more likely to view it as unacceptable. The study also finds that students in both countries are more likely to view bribery as acceptable in business, but students in China are more likely to view it as unacceptable. The study has implications for business ethics education in both countries.

**Abstract** This paper examines the ethical implications of the use of social media in the workplace. It begins by defining social media and discussing its widespread use in organizations. The paper then explores the ethical challenges that arise from social media use, such as privacy concerns, data security, and the potential for harassment and discrimination. It also discusses the importance of developing a clear social media policy for organizations to address these challenges. The paper concludes by offering recommendations for organizations to promote ethical social media use in the workplace.

The rapid growth of social media has transformed the way we communicate and interact. In the workplace, social media has become an integral part of many organizations' operations. While social media offers numerous benefits, such as improved communication and collaboration, it also presents significant ethical challenges. This paper explores these challenges and offers recommendations for organizations to address them.
